DISHA BISWAS

Bicester, UK | P: +44 7587678538 | bidisha2125@gmail.com | LinkedIn | GitHub | Personal Website

TECHNICAL SKILLS

Languages:	Java, Kotlin, Python, SQL, JavaScript, TypeScript, C++
Backend & Cloud:	Spring Boot, Spring Security, OAuth 2.0, FastAPI, Node.js, REST APIs, Microservices
Frontend Technologies:	JavaScript, React.js, Next.js, HTML5, CSS3, JSX, Tailwind CSS
Distributed Systems & Data:	Apache Kafka (Consumer), MySQL, MongoDB, PostgreSQL, Redis, DynamoDB
Azure:	Azure Container Registry (ACR), Terraform
AWS:	SQS, Lambda, EventBridge, DynamoDB Streams, EC2, S3, IAM, API Gateway, ECS, CloudFormation, CodePipeline, CodeDeploy, CloudWatch, Elastic Beanstalk
DevOps & Observability:	Docker, Kubernetes, ArgoCD (GitOps), GitHub Actions, CI/CD, Honeycomb, Grafana
Others:	TDD, BDD, SOLID, Agile/Scrum, DSA, DBMS, Operating Systems, OOP, Computer Networks

PROFESSIONAL EXPERIENCE

Valvenok Ltd — Bicester, UK
Junior Software Engineer — Sep 2026 – Present

- Own the **Kosaplus UK** e-commerce platform end to end as the Java engineer, from database design and **REST APIs** to **Azure** deployment, and contribute to the company's other websites and services.
- Built a **Spring Boot** product catalogue API and a rules-based configurator that turns customer choices into a valid, priced product, and cut catalogue **p95 latency from 119 ms to 4 ms (up to 28x)** with **Redis** caching.
- Built a single sign-on identity service with **Spring Boot** and **Spring Security** (**OAuth 2.0 / OpenID Connect**) for secure customer accounts across several company websites.
- Practise **TDD** and **BDD** with **SOLID** principles, clean REST API design, structured logging and exception handling, in an agile team with thorough code reviews.
- Containerised services with **Docker** and **Azure Container Registry**, provisioned Azure with **Terraform**, and automated tests, security scanning and deployment in **GitHub Actions** CI/CD, fixing critical vulnerabilities the scans found.
- Built **Next.js** and **TypeScript** storefronts and led technical **SEO** (structured data, sitemaps) to grow organic traffic.

SumUp — London, UK
Software Engineer Intern — Jun 2026 – Sep 2026

- Engineered and shipped a multi-channel order ingestion engine using **Java/Spring Boot**, deploying production-ready **OAuth 2.0** merchant onboarding and third-party delivery integration to remove multi-tablet friction for merchants.
- Eliminated webhook drop-off risks under peak order volume, achieving **99.9%+ ingestion reliability** by building an asynchronous buffering pipeline via **AWS SQS** with dead-letter queue (DLQ) exponential backoff and retry policies.
- Maintained **<500ms** order-state orchestration with an asynchronous **Apache Kafka** consumer that ingested POS read models, transformed cross-platform payloads, and synchronized real-time financial reporting via internal Sales APIs.
- Engineered dynamic kitchen throttling by extending a serverless microservice (**TypeScript, AWS Lambda, DynamoDB Streams, EventBridge**) for real-time busy modes, prep-time adjustments, and single-order delays across Kitchen Display Systems (KDS).
- Guaranteed zero regression failures across release cycles by building comprehensive unit and integration test suites, automated within CI/CD pipelines to validate payload mappers and state transitions prior to promotion.
- Leveraged AI coding agents (**Cursor**, **Claude**) to accelerate feature development, automate boilerplate and test scaffolding, and speed up code review turnaround across the sprint cycle.
- Collaborated with product and platform teams in an agile Scrum environment, with sprint planning, code reviews, and Git-based PR workflows to ship on schedule.
- Accelerated releases across Theta, Staging, and Production with **GitOps** rollouts via **ArgoCD** on **Kubernetes**, and cut debugging time and MTTR with end-to-end tracing in **Honeycomb** and log analysis in **Grafana**.

University of Exeter (MSc Research Project) | GitHub Repo — Exeter, UK
Software Engineer — Jul 2025 – Sep 2025

- *MSc Research Project:* Developing a web-based decision support tool that applies **linear programming** over probabilistic **attack graphs** to recommend cost-effective, resilience-aware cybersecurity control portfolios.
- Built a **FastAPI** backend using **PuLP** to solve multi-objective MILP models, achieving sub-2-minute solve times for scenarios with 30+ controls.
- Integrated **MongoDB** for scenario storage and comparison, added an explanation module for each control's cost-effectiveness ratio, and deployed with **AWS EC2, CodePipeline, CodeDeploy, and Elastic Beanstalk** with full CI/CD automation.

EDUCATION

University of Exeter (Grade: Distinction) — Exeter, United Kingdom
Master of Science in Advanced Computer Science — Sep 2024 – Sep 2025

- Relevant Coursework: Enterprise Computing, Software Engineering, Cloud Computing, Machine Learning

Netaji Subhash Engineering College (CGPA: 9.29/10) — Kolkata, West Bengal
Bachelor of Technology in Computer Science Engineering — Sep 2020 – Jun 2024

- Relevant Coursework: DBMS, Operating Systems, Data Structures and Algorithms, OOP

CERTIFICATIONS

AWS Certified Developer – Associate (DVA-C02) | Credly Link — Nov 2025
